How do we get rid of those veins?

With a simple in-office injection therapy using tiny needles called Sclerotherapy, that's completely non-surgical. We just inject an FDA approved medication (sclerosant) solution into the spider vein in order to cause its disappearance. Most patients find there's hardly any discomfort. And you can relax because no surgical incisions are made and anesthesia is not necessary.

So, what are Varicose Veins?

Varicose Veins are swollen and twisted veins that are visible just under the surface of the skin. They appear most commonly in the legs, but also can develop in other parts of the body. Varicose veins usually don't cause major medical problems. They require treatment for pain, skin problems, blood clots, or other complications. People may choose to have cosmetic treatment to improve the appearance of varicose veins.

Spider Veins are a smaller type of varicose vein. Spider veins are commonly found on the legs and face, and they usually resemble a spider web or tree branch in shape. They can be red or blue. Spider veins are usually not a medical concern.

Reticular Veins are flat blue veins commonly seen behind the knees or on the thighs. They are typically larger than spider veins. Spider veins arise from reticular veins. Reticular veins need to be eradicated in order to have a good result from spider vein treatment.

How successful is Sclerotherapy?

It's incredible! After a treatment session that lasts approximately 30 minutes, most patients notice a 50-90% improvement in the appearance and symptoms within a few short weeks. Then, we can determine if any additional therapy is needed.

Spider veins are challenging to eradicate. Results may vary. Be realistic with your expectations.
About Your Sclerotherapist

Carrie Drum, RN, BSN
Clinical Aesthetic Specialist at the Rockland Vein Center

Carrie graduated from Manhattan College with a Bachelor of Science in Exercise Physiology. After graduation she was employed as a personal trainer and Director of Corporate Fitness at numerous locations throughout New York. She then attended and graduated from Dominican College with a Bachelor of Science in Nursing and is licensed in New York and New Jersey. After nursing school, Carrie advanced her career to become a critical care nurse and worked for over 10 years in the emergency room, medical/surgical intensive care units and the cardiac care unit at Englewood and other local hospitals. She also worked for Wellness 360 as its Senior Health Advocate, dedicating herself in assisting corporate clients and their families in finding the best health care in New York City.

In 2010 Carrie began her employment with Rockland Thoracic and Vascular Associates. She is currently the Clinical Nurse Coordinator at the Rockland Vein Center, one of the only accredited vein centers in the region. Carrie is certified in all types of Sclerotherapy including Foam Sclerotherapy for larger veins. Carrie is also certified in Botox and Dermal Fillers. She has treated hundreds of satisfied patients in Rockland and Bergen County.

Carrie is dedicated to having her clients look and feel their best. She strives to achieve that goal in a comfortable, medically safe environment.
